1.1 Find process

Name	Comment
Sort processes by ram usage	ps -eo size,pid,user,pcpu,commandsort -rss
Sort processes by cpu usage	ps -eo size,pid,user,pcpu,commandsort -pcpu
Find process by name	pgrep <pre>process_name></pre>
Get parent process id by pid	ps - opid = -p < pid >
List zombie processes	See zombie-process.sh

1.2 Debug process

Name	Comment
Trace system calls and signals by pid	strace -p <pid></pid>
List all file handlers by pid	lsof -p <pid></pid>
Display process tree by pid	pstree -A -n -p <pid></pid>
List all listening ports by pid	See proc-listen-ports.sh

1.3 Kill process

Name	Comment	
Kill process gracefully	kill <pid>, kill -15 <pid>, kill -TERM <pid></pid></pid></pid>	
Kill process by force	kill -9 <pid>, kill -KILL <pid></pid></pid>	
kill process by its full process name	pkill <processname></processname>	
kill process by it's partial name	<pre>pkill -f <pre>process-string></pre></pre>	
Kill process by process name	killall <process_name></process_name>	

1.4 Explore /proc filesystem

Name	Comment
Check process start command	cat /proc/\$pid/cmdline
Check process environment variables	cat /proc/\$pid/environ
Check process ulimits setting	cat /proc/\$pid/limits
Check cpu utilization	/proc/loadavg
Get current IP from /proc	See proc-get-ip.sh
