1.1 Linux Networking

Name	Comment
Scan tcp listening ports for a given server	sudo nmap -0 192.168.1.103
Check dns naming	sudo nslookup www.google.com
Print routing table	netstat -rn
List all the router hops	traceroute
DNS lookup utility	host www.google.com
Get detail report for a given NIC	ethtool -S eth0
Check system configuration	sysctl -a
Linux mapping from well-known services to ports	cat /etc/services
	netstat -i
	arp -a

1.2 Networking testing

Name	Comment
-tc	Adding simulated network latency
Add 97ms latency to eth0	tc qdisc add dev eth0 root netem delay 97ms
Check status	tc -s qdisc
Remove the rule	tc qdisc del dev eth0 root netem
Test your network speed	http://www.att.com/speedtest/

1.3 TCP sockets workflow

Name	Comment
create a new anonymous socket	s = socket(<parameters>)</parameters>
Bind tcp port to a socket	<pre>bind(s, <local ip:port="">)</local></pre>
Create a socket to remote endpoint	<pre>connect(s, <remote ip:port="">)</remote></pre>
Create local socket and make it eligible to take requests	listen(s,)
Accept client requests	s2 = accept(s)
Read n bytes from a socket	<pre>n = read(s, buffer, n)</pre>
Write n bytes to a socket	<pre>n = write(s, buffer, n)</pre>
Close a socket	close(s)
Shutdown stdin and stdout/stderr for a socket	<pre>shutdown(s, <side>)</side></pre>
Read socket options	<pre>getsockopt(s,)</pre>
Change socket options	setsockopt(s,)

1.4 TCP

Name	Comment
Tcp manual	man 7 tcp
Reference	Tcpdump CheatSheet

1.5 HTTP

Name	Comment
Reference	Curl CheatSheet

1.6 References

Name	Comment
RFC793	http://www.ietf.org/rfc/rfc793.txt
Reference	Tcpdump CheatSheet, Curl CheatSheet, SSH CheatSheet
