1.1 Cluster API - Basic

| Name | Summary |
|-------------------------------|---|
| Cluster API Project Milestone | v1alpha1(Due by 03/29/2019) |
| Key Initiatives | Declarative infra; CRD design model; Resource LCM |
| CAL (cloud abstraction layer) | |
| Boostrap cluster | minikube by default |
| Machine Object | Machine CRD |
| Cluster Object | |
| clusterctl | GitHub: cluster-api/cmd/clusterctl, Might be merged into kubectl directly |
| Demo | Video: vSphere Clsuter-API provider: self-service |

1.2 Concepts

| Core Kubernetes | Cluster API |
|-----------------|-------------------|
| Pod | Machine |
| ReplicaSet | MachineSet |
| Deployment | MachineDeployment |

1.3 Components

| Name | Summary |
|------------------------------|---|
| API Spec | Link: Kubernetes Cluster Management API |
| provider-components.yaml | |
| cluster.yaml | |
| machines.yaml | |
| addons.yaml | |
| 2 pods in guest k8s clusters | cluster api controller, cloud provider controller |
| Reference | GitHub: kubernetes-sigs/cluster-api |

1.4 Commands

| Name | Summary |
|--------------------------------|--|
| Deploy a k8s cluster | clusterctl create cluster -p provider-components.yaml -c cluster.yaml -m machine |
| Delete a k8s cluster | clusterctl delete clusterkubeconfig=kubeconfig -p provider-components.yaml |
| List all kind clusters | kind get clusters |
| Delete kind cluster | kind delete clustername clusterapi |
| Create kind clusrer | kind create clustername clusterapi |
| SSH to K8S master/worker vm | ssh -i /root/.ssh/vsphere_tmp ubuntu@\$vm_ip |
| kubeconfig in new k8s clusters | /etc/kubernetes/admin.conf in master VM |

1.5 Cluster API Providers - vsphere

| Name | Summary |
|----------------------|--|
| Check controller log | kubectl logs -n vsphere-provider-system vsphere-provider-controller-manager-0 -f |
| Vsphere | GitHub: Vsphere Example Files |

1.6 Cluster API Related Works

Name Summary
SAP gardener
Gardener with cluster api GitHub Issue: Adopt Cluster API Spec

1.7 clusterctl cli Online Help

> go/src/sigs.k8s.io/cluster-api-provider-gcp > ./bin/clusterctl create cluster --help

IO311 17:25:43.924329 50076 machineactuator.go:811] Using the default GCP client Create a kubernetes cluster with one command

Usage:

clusterctl create cluster [flags]

Flags:

-a, --addon-components string A yaml file containing cluster addons to apply to the internal --bootstrap-cluster-cleanup Whether to cleanup the bootstrap cluster after bootstrap. (defa Sets the bootstrap cluster to be an existing Kubernetes cluster -e, --bootstrap-cluster-kubeconfig string Command line flags to be passed to the chosen bootstrapper --bootstrap-flags strings --bootstrap-type string The cluster bootstrapper to use. (default "none") -c, --cluster string A yaml file containing cluster object definition. Required. -h, --help help for cluster Where to output the kubeconfig for the provisioned cluster (def --kubeconfig-out string A yaml file containing machine object definition(s). Required. -m, --machines string --provider string Which provider deployment logic to use (google/vsphere/azure). A yaml file containing cluster api provider controllers and sup -p, --provider-components string

Global Flags:

log to standard error as well as files --alsologtostderr --kubeconfig string Paths to a kubeconfig. Only required if out-of-cluster. --log-flush-frequency duration Maximum number of seconds between log flushes (default 5s) --log_backtrace_at traceLocation when logging hits line file:N, emit a stack trace (default :0) --log_dir string If non-empty, write log files in this directory --log_file string If non-empty, use this log file --logtostderr log to standard error instead of files (default true) The address of the Kubernetes API server. Overrides any value in kub --master string --skip_headers If true, avoid header prefixes in the log messages logs at or above this threshold go to stderr --stderrthreshold severity -v, --v Level number for the log level verbosity --vmodule moduleSpec comma-separated list of pattern=N settings for file-filtered logging
